WeRateDogs action report

Introduction

We have three insights for our data visualize or display on simple way, our action report is consist of Visualize Data by Pie Chart, it's clear way for understand data clearly,

First Insight : Top 3 favorites dogs :
we have unique ID for each dog on our Data base, every id related for all information, like url, name, rate and so on, there is top 3 favorites doges on data base and we have this unique ID for each one
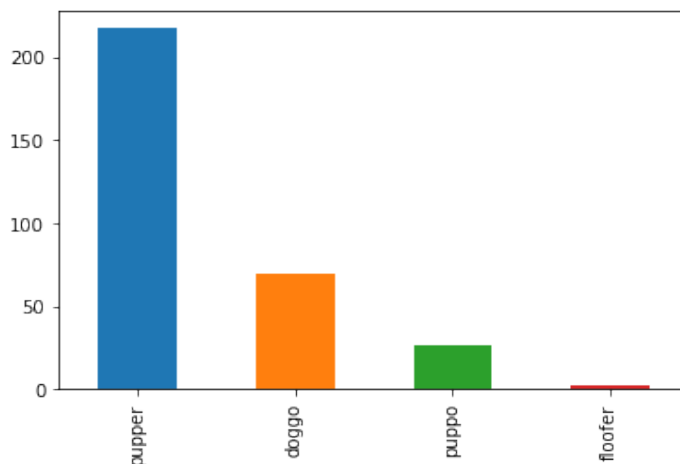

1- ID : 744234799360020481

2- ID : 822872901745569793

3- ID : 807106840509214720

Second Insight : Most common Type of dogs
We have Type for each dog on data base, that types mainly on four types here (pupper, doggo, puppo, floofer) a 217 pupper dogs with first most common , and 40 doggo dogs with second most common , and long gab also in third common with 27 in puppo dogs, and finally floofer with 3 times .

Third Insight : Top 5 Common Names of dogs

a lot of names is common in dogs, some names was related by human names and some it's not, It's a pref for top 5 common names, but we have many names more related by doges information also every name have unique data base id, image, rate and more, we filler all of these names for visualize the most common names of doges , we have Oliver 10 names , also Charlie and cooper haves 10 names and last thing Penny and lucy haves 9 names for each one .

Conclusion:

I have interesting to Analysis Data with WeRateDogs twitter account, glad to haves a tweeter developer account to wrangling data for visualize a best result, It's a good and unique skill for me, want to thanks Udacity and tweeter development teams for give me this experience and complete the project
